Top Layer & Colour Blends

Australian Surfacing Supplies stocks high-quality cushion layer materials designed for the wet pour rubber industry. Suitable for use under all types of synthetic turf and ideal for access ramps and expansion joints. Our rubber crumb is of excellent quality, clean of steel, textile fibre and inert providing a solution for surfacing that requires a high impact absorbing capacity and is a more economical installation alternative to shockpads, especially around play equipment or built in obstacles.

IMPORTANT: Not all warehouses locations stock all varieties. Bag sizes come in 20kg & 25kg sizes, Australian Surfacing Supplies will always round up to the nearest full bag when you place an order. *Availability and granule size can change without notice and where required a suitable substitute will be provided. If granule / mesh size is important to you and your project please advise the specific size required at time of ordering.
